# Robotics rule

Imagine you can program a robot to do anything you want. What will you program it to do and why?

Keep in mind: Robots don't have to be humanoid (shaped like a person) and they can do a lot more than bring you a snack. There are robots that can make music, explore shipwrecks, and send you a comforting text when you're feeling down.

Bonus: Write specs for your robot. Specs, aka specifications, are the dimensions, materials, and descriptions engineers use to have something built. (Use the back of this page to write.)
