

Matching directions

Look at the first shape on each line. Draw a circle around the shape that is pointing the **same** way.

Matching directions

Look at the first shape on each line. Draw a circle around the shape that is pointing the **same** way.

These activities use more complex and abstract shapes. Encourage your child to find the shape pointing the same way as the first one shown on the left and draw a circle around it. If your child finds this task difficult, demonstrate and practice the activity with two toys, such as cars or dolls. Keep one car in one position and keep rotating a second car into different positions. Encourage your child to say “stop” when the two cars are in the same position.
